In the static page storage point of config-global setting, change it to cp and WEB-INF in the same directory, and then access the HTML file in the file to obtain and modify important files. There are unauthorized access, sensitive information disclosure, and important code modification vulnerabilities

## Change the parameter to /cp

```
### HTMLTR - GRAPH

| Company | Comp
```

## vulnerability analysis

## The path parameter is not restricted

```
@GetMapping(@>"storage-path-allowed")
public boolean storagePathAllowed(String path) {
    if (StringUtils.isBlank(path)) {
        return false;
    }
    path = path.trim();
    if (!path.startsWith(PathResolver.FILE_PREFIX)) {
        return true;
    }
    for (String prefix : props.getStorageFilePrefixList()) {
        if (path.equals(prefix) || path.startsWith(prefix + FilesEx.SLASH)) {
            return true;
        }
    }
    return false;
}
```
